

Mounting tools for LV and MV overhead distribution systems

DP - Mounting pulley

To use with low voltage pre-assembled networks, robust design, with cable lock and safety latch. The DP1 model features a post clamping system.

JMH - Hidraulic compression tool

For the compression of terminals and insulated joints up to 240mm², fitted with a 180-degree rotating head that provides great adaptability to the type of work needed, 5 tn., fibreglass operating lever with neoprene grip, supplied in a handy metal box suitable for transportation and storage. A set of matrices is also included.

PI - Wire stripper

For stripping contact terminals in low-voltage encapsulated overhead fuseholders.

JBCR - Jackscrew with a 13 mm tube

To simplify the connector installation on overhead networks, with reversible jack, 13-mm hex tool and insulated grip for enhanced protection.

DSFP - Phase Separator

For connector installation on pre-assembled networks. It facilitates the task of separating conductors. Body moulded from synthetic material

JC - Cable cutter

For cutting conductors on pre-assembled overhead networks. It accommodates a wide range of conductor

JP - Cable puller

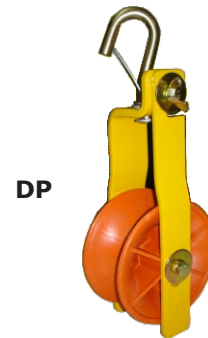

For overhead network conductor wiring. On tightening, it transfers tensile stress. The design with clamps prevents unnecessary wear of conductors.

CT - Cable mounting kit

For the installation of pre-assembled conductors, featuring a mesh for neutral pulling, a phase protection mesh and bearing linking.

ZUN - Clamping tool

Fitted with a shear at one end, it is suitable for stretching bands of various sizes with loads up to 1,000 kg. Its light weight (2 kg.) makes for ease of use.

ZUN-A

MODEL	DESCRIPTION
DP	Mounting pulley
DP1	Mounting pulley with adjusting system to a post
JMH	Hidraulic tool with matrix set indentation clamp
PI	Wire stripper
JBCR	Jackscrew with 13mm tube
DSFP	Phase Separator
JC	Cable cutter
JP	Cable puller
CT	Cable mounting kit
ZUN	Clamping tool
ZUN-A	Automatic clamping tool
